

Praddyumn Wadekar

Python Backend & Automation Engineer

Pune, India · wadekarpraddyumn1@gmail.com · github.com/praddyumnwadekar · linkedin.com/in/praddyumnwadekar/

PROFILE

Python Developer with 5+ years of experience designing scalable Python applications, automation frameworks, and software validation solutions at Espressif Systems. Experienced in OOP, Git, CI/CD, debugging, Django REST APIs and data-driven systems.

IMPACT

95%+ Bluetooth validation coverage	30% less active debugging effort	5+ years production Python
--	--	--------------------------------------

EXPERIENCE

Python Automation Developer — Espressif Systems · Jul 2021 – Present · Pune, India

Production Python engineering across test automation, reusable OOP libraries, software validation and log-analysis tooling for Wi-Fi and Bluetooth products. Scope grew from individual automation work toward reusable framework and tooling ownership.

- Engineered reusable Python automation frameworks covering regression, stress, interoperability and performance validation; expanded Bluetooth validation coverage to 95%+.
- Built specialized log-analysis tooling to parse and filter large execution outputs and isolate runtime anomalies; reduced active debugging effort by 30%.
- Integrated automation into CI/CD workflows for repeatable release and regression validation.
- Technologies: Python, OOP, Git, Jenkins, GitLab CI, Linux, JIRA, Bluetooth validation, log analysis.

SELECTED PROJECTS

ShipShop — Full-Stack Django & DRF E-Commerce Engine

Modular e-commerce platform with catalog discovery, variation-aware carts, authentication, order management, reviews and PayPal checkout. Built with Django/DRF, MySQL and Django ORM.

- GitHub: github.com/praddyumnwadekar/shipshop

Python Validation Framework — Professional Engineering Case Study

High-level case study of reusable Python automation and log-analysis work used for production software validation. Proprietary implementation details omitted.

- Outcomes: 95%+ Bluetooth validation coverage and 30% less active debugging effort.

TECHNICAL SKILLS

Backend: Python, Django, Django REST Framework, Django ORM, REST APIs, authentication, payment integration

Automation: Python automation, regression, stress, interoperability, performance testing, Bluetooth validation, log analysis

Data & DevOps: MySQL, SQLite, Git, Jenkins, GitLab CI, Linux, Postman

Other: TensorFlow, CNN, JavaScript, HTML/CSS, Bootstrap, OOP, data structures, debugging

EDUCATION

B.E. in Computer Engineering — MES Wadia College of Engineering · 2018–2021 · CGPA 8.83/10
